BACKGROUND OF THE INVENTION

Field Of The Invention

[0002] The invention relates to a method of recording an information signal representing at least one information unit on a record carrier having a recording track comprising pre-formed track position information indicative of predefined locations for consecutively recording the information units, and a first one of said locations comprising an earlier recorded information signal, the method comprising the steps of generating, from the information signal, a modulated signal having successive frames, each frame including a synchronizing signal, and scanning said recording track and recording the modulated signal at a second one of said locations, while controlling such recording so as to maintain a fixed relationship between the track position information and the synchronizing signals.

[0003] The invention further relates to a device for recording an information signal representing at least one information unit on a record carrier having a recording track comprising pre-formed
